**Annual Benefit Report of Beta Bionics, Inc.  
2021**

Beta Bionics, Inc. (the “Company” or “Corporation”) was incorporated as a Massachusetts benefit corporation on October 21, 2015. This Annual Benefit Report is prepared in accordance with Chapter 156E of the Massachusetts General Laws, Section 15 and covers the Company’s activities through December 31, 2021.

Our General and Specific Public Benefit and Mission

The Company has the stated purpose of creating a general public benefit as well as a specific public benefit of improving public health. To that end, the Company’s Board of Directors adopted and approved comprehensive bylaws enumerating and explaining the manner in which the Company will pursue its specific public benefit purpose for the type 1 diabetes (“T1D”) community. The bylaws establish the following four guiding principles of the Company’s public benefit since inception:

1. To provide a solution for safe and effective autonomous glycemic control;
2. To bring the Corporation’s technology to as many people with diabetes as possible as quickly, and as responsibly as possible;
3. To continue to innovate in the diabetes space and offer the latest advances as soon as we can responsibly do so; and
4. To act in the best possible interest of the diabetes community in connection with fulfilling the Company’s corporate functions.

Actions to Accomplish General and Specific Public Benefit

In 2021, Beta Bionics continued the clinical development of its iLet bionic pancreas (the “iLet” or “iLet system”).

*Completion of the Insulin-Only Bionic Pancreas Pivotal*

In 2021, the Company announced the completion of the randomized controlled trial for the Insulin-Only Bionic Pancreas Pivotal Trial. The Insulin-Only Bionic Pancreas Pivotal Trial was an investigator-initiated, multi-center, randomized controlled trial funded, in part, by a grant from the National Institutes of Health to Boston University, and conducted in collaboration with the study coordinator, the Jaeb Center for Health Research, and 17 clinical research centers across the U.S. It was designed to test the safety and efficacy of the insulin-only configuration of the iLet Bionic Pancreas System relative to a standard-of-care control group over a 13-week study period. The trial was conducted in the home-use setting and enrolled approximately 440 adults and children 6

years and older with type 1 diabetes. It was the largest sample size to date for a randomized controlled trial of an automated insulin delivery system.

The Company is committed to making its type 1 diabetes management technology accessible to the many, not just the few. Consequently, the trial was designed to reach a broad demographic with respect to race, ethnicity, age, therapy type, and baseline glycemic control. A large cross-section of trial participants was recruited in an attempt to represent, as closely as possible, the type 1 diabetes population in the U.S. Data lock for the randomized controlled trial occurred in early December 2021.

*Enrollment in the Screening Protocol for the Planned Pivotal Trial of the Company's Bihormonal iLet Configuration*

Enrollment into the screening protocol of the Bihormonal Bionic Pancreas Pivotal Trial began in December 2021 at Massachusetts General Hospital. The screening protocol identifies potential participants for the pivotal trial. This trial is being coordinated by the Jaeb Center for Health Research and will test the bihormonal configuration of the iLet Bionic Pancreas System using Zealand Pharma's dasiglucagon in adults and children 6 years and older with type 1 diabetes. The trial includes three sub-trials, which are anticipated to provide the clinical data necessary to support the market application for the bihormonal configuration of the iLet Bionic Pancreas and the new-drug application (NDA) for the use of dasiglucagon in bihormonal artificial pancreas systems.

The first of these three sub-trials will be an initial three-month single-arm, bihormonal-only safety and test-run period that will enroll two participants at each of the approximately 30 clinical sites. A six-month, three-arm, randomized controlled trial will follow the test-run period and will enroll approximately 700 participants. A six-month extension study will immediately follow the randomized controlled trial for all of the approximately 700 participants.

No Hindrance to Creation of Public Benefit

No circumstances were present in 2020 that materially hindered the Company's creation of its general or specific public benefit.

Continued Partnership with B Lab as the Company's Third-Party Public Benefit Review Standard

Shortly upon incorporation, the Company selected B Lab ([www.bcorporation.net](http://www.bcorporation.net)), a non-profit organization that certifies Benefit Corporations via its B Lab Impact Assessment and B Analytics tools to measure and manage positive impact. B Lab is the most widely recognized and rigorous third-party standard for certifying and measuring corporate public benefit and sustainability performance. Beta Bionics undertook the B Lab Impact Assessment in 2016 and became a certified B Corporation in 2017. Under new B Lab policy, certification continues for a period of three years. Beta Bionics began the assessment cycle in 2019 and was recertified in 2020.

### Certification of the Company's Benefit Director

I, Edward Damiano, certify that I am the duly elected Benefit Director of Beta Bionics, Inc. At no time have I held, nor do I currently hold, any other positions within the Company. I have not received any compensation for my services as a Benefit Director of Beta Bionics, Inc. I have reviewed the Company's public benefit report and certify as to the accuracy of its contents. The Company has acted in accordance with its general public benefit as well as its specific public benefit purpose in all material respects during the period covered by this report. I further certify that the directors and officers have complied with subsection (a) of Section 10, subsections (a) to (g) of section 11, and subsection (a) of Section 12 of Chapter 156E of the Massachusetts General Laws. In my opinion, the Company's benefit status has and will continue to have a positive impact on its business including creating a positive consumer opinion, increasing return on investment, positively impacting shareholders and its employees as well as the T1D community.

Executed on this 15<sup>th</sup> day of March 2022,

DocuSigned by:

*Edward Damiano*
